Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 The gene cluster nisABTCIPRK (see AAT29660 and AAT29661) of Lactococcus lactis includes the nisA gene coding for pre-nisin A (AAR95267, see also AAR95263) and the genes for nisin modification, secretion and immunity. nisB (AAR95268) and nisC (AAR95270) are believed to be involved in reactions that modify pre-nisin; nisT (AAR95269) is
                                                                                         Making cell which expresses nisin but gene - by providing cell with variant modification, secretion and immunity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The leader peptide assists in inducing post-translational modification a protein precursor when attached to the precursor as a leader. The precursor polypeptide contains Ser, Thr and Cys which undergo modification after translation to arrive at the the mature protein , having unusual amino acids. Tag a is claimed in the patent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAR95267;

                                                                                                                                                                                                                                                                                                             nis A gene (see AAX87792). Nisin A is lanthionine-containing bacteriocin. The invention relates to methods of enhancing performance in an animal by administering a bacterium capable of expressing a performance enhancing polypeptide such as misin A or nisin Z. The enhanced performance results in improved growth rates and feed conversion efficiencies. The bacterium, which may be genetically modified to express the performance enhancing polypeptide, is administered to the gastrointestinal tract, especially to an embryo or meonatal animal. If the polypeptide is nisin, it may also inhibit ruminal methane, decrease acetate to propionate ratios and prevent amino acid deamination.

Administration of an appropriate bacterium which may act as a management of the polypeptide is a minimistration of an appropriate bacterium which may act as a management of the polypeptide is a minimistration of an appropriate bacterium which may act as a management of the polypeptide is a minimistration of an appropriate bacterium which may act as a management of the polypeptide is a minimistration of an appropriate bacterium which may act as a management of the polypeptide is a minimistration of an appropriate bacterium which may act as a minimistration of an appropriate bacterium which may act as a minimistration of an appropriate bacterium which may act as a minimistration of an appropriate bacterium which may act as a minimistration of an appropriate bacterium which may act as a minimistration of an appropriate bacterium which may act as a minimistration of an appropriate bacterium which may act as a minimistration of an appropriate bacterium which may act as a minimistration of an appropriate bacterium which may act as a minimistration of an appropriate bacterium which may act as a minimistration of an appropriate bacterium which may act as a minimistration of an appropriate bacterium which may act as a minimistration of an appropriate bacterium which may act as a minimistration of an appropriate bacterium which may act as a minimistra
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   similar to a transport ATPase and is involved in translocation of nisin out of the cell; nisI (AAR95271) is involved in immunity to nisin. Replacement of the natural, chromosomal copy of the nisA gene with a variant nisA gene allows prodn. of high levels of nisin A variants in Lactococcus lactis hosts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel performance enhancing method resulting in improved rates and feed conversion efficiencies in animals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nisin A; nis A; lantibiotic; animal performance; growth rate; feed conversion; probiotic; bacteriocin.

                                                                                                                                                                                                                                                                                                                                                           This is the amino acid sequence of nicin A used in the method of the invention involving the use of prosublancin 168. The peptide designated sublancin 168, is an antimicrobial useful for treating infections and preserving food against spoilage bacteria, particularly Gram-positive bacteria. Pro-sublancin 168 and pre-sublancin 168, are the precursors of sublancin 168. Sublancin 168 is very stable at low pH and can be autoclaved without damage. It does not decompose after 2 years in aqueous solution of about
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antimicrobial peptide, sublancin 168, from Bacillus subtilis used for, e.g. treatment of infections caused by Gram negative bacteria and as food preservative

Total DNA was isolated from the L. lactis strains NIZO 22186 and NIZO R5. With the aid of the nisA gene of strain NIZO R5 as a probe, a 4.5 kb HindIII fragment was identified in the total DNA strain NIZO 22186, which was then cloned in M13 mpl8. The DNA sequence of the gene for nisin Z production (nisZ) was determined by making use of oligos complementary to the 5' and 3' flanking sequences of the nisA gene. The nucleotide sequence for the nisA gene is found to be identical to that of the nisA gene with the exception of a C to A transversion in posn. 148 which results in the replacement of AA His27 by Asn27. The above indicate that the structure of nisin Z is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New lantiobiotic cpds. related to nisin {\bf A} - and Lactococcus strains which produce them, useful as preservatives for foods and animal feeds

                                                                                                                         encoded protein inhibits selected gram positive bacteria and this property is enhanced if further purified by HPLC. The materials being treated to provide inhibition are preferably foods, although other materials may be treated.
                                                                                                                                              The sequence (AAQ49150) was amplified using primers (AAQ49151-52). encoded protein inhibits selected gram positive bacteria and this property is enhanced if further purified by HPLC. The amount of bacteriocin required to provide inhibition is 15-100 arbitrary units per gram of material. The materials being treated with the bacteriocin to provide inhibition are especially foodstuff (Updated on 25-MAR-2003 to correct Pf field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Key

The enhanced performance results in improved growth rates and feed conversion efficiencies. The bacterium, which may be genetically modified to express the performance enhancing polypeptide, is administered to the gastrointestinal tract, especially to an embryo or neonatal animal. If the polypeptide is nisin, it may also inhibit ruminal methane, decrease acetate to propionate ratios and prevent amino acid deamination. Administration of an appropriate bacterium which may act as a probiotic may also help control enteric pathogens in poultry. The polypeptide is produced continuously in the gut, maintaining a constant level. The protein is eventually degraded, leaving no residues in the meat.
                                                                                                                                                                                                                                                                                                           Prepn. of lanthionine contg. peptide(s) antiviral drugs, immunosuppressants and
                                                                                                                                                                                                                    Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 09-MAR-1993;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       57
```

0,

This is one of 5 peptides (AAR62635-R63639) containing Cys and Thr residues which were synthesised and tested for their useful as intermediates for the preparation of peptides which include lanthionine. Peptides 3 and 4 (AAR62637-8) produced lanthionine

produced lanthionine,

usefulness

Ser or

methyllanthionine could be produced from peptide

                                                                                      Matches
                                                                                                                                                                                                                                      AAW66393 to AAW66469 represent native cationic peptides from the present invention. The present invention describes compositions and methods for treating infection, especially bacterial infections. The compositions and methods use cationic peptides in combination with an antibiotic agent which are then administered to a patient to enhance the activity of the antibiotic agent, to overcome: (a) tolerance; (b) acquired resistance; and (c) inherent resistance. The combinations of antibiotics and cationic peptides can provide synergistic activity against a microorganism that is tolerant, inherently resistant, or has acquired resistance to an antibiotic agent. They can be used for killing e.g. bacteria, fungi, parasites and viruses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            both lanthionine and 2 (AAR62636).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New indolicidin peptide analogues - useful for, e.g. enhancing activity of antibiotic or overcoming tolerance, acquired resistance or inherent resistance of microorganisms

The invention relates to a pharmaceutical composition containing at least one activated polyoxyalkylene (APO) modified actionic peptide. The modification of peptides with APO increases their activity against tumour cells, including those with a multidrug resistant phenotype. The pharmaceutical composition can be used to treat tumours; specifically
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cationic peptide; tumour; pharmaceutical composition; cancer; treatment; leukaemia; polyoxyalkylene-modified; APO; lymphoma; multiple myeloma; breast; lung; ovary; cervix; uterus; skin; prostate; liver; colon; multidrug resistance.
Transplant; antimicrobial peptide; pore forming agent; cell surface receptor binding compound; kidney transplant;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cc antimicrobial polypeptides or pore forming agents and/or cell surface cc receptor binding compounds. The media is capable of extending the preservation period past 72 hours and can provide organs with increased cc functionality upon transplant animals receiving kidneys stored in the media of the present invention for either three or four days had serum creatinine levels of less than half of those observed in control animals cc receiving kidneys stored in UW solution (defined in the specification) and a more preferable prognosis for the transplant patient. The media of the invention are useful for decreasing the incidence and/or severity of delayed graft function in patients receiving transplanted kidneys stored cc and/or treated in the media. The media may also be used in procedures cc such as cardioplegia. It is contemplated that transplant of healthier corporate leads to a decrease in chronic rejection. This sequence represents an animicrobial peptide studied in the development of the transplant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     substrate peptides, peptides targeting receptors in the brain and kidney, peptides recognising fibronectin- and vitronectin-binding integrins, peptides targeting the RGD (Arg-Gly-Rsp)-motif in, e.g., antibodies, peptides targeting the angiogenic endothelium of solid tumours, tissue specific peptides (e.g. of lung, skin, pancreas, intestine, uterus, adrenal gland and retina), and cationic cancertargeting peptides. The present sequence is a peptide targeting ligand disclosed in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          homogeneously dispersed in a targeted matrix (polymer and targeting ligand). Also included are a targeted matrix for use as a delivery vehicle comprising a polymer associated with a targeting ligand, enhancing the bicavailability of an agent comprising administration of the composition and treating cancer comprising administration of novel composition. The method is useful for targeted delivery of a despecially in cancer therapy. The targeting ligand may be a peptide. Examples of targeting peptides are disclosed including cathepsin-D
                                                                                                                                                                          Subtilin-nisin chimera.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence

The present sequence represents a chimeric pre-peptide composed of a subtilin leader region and a subtilin-nisin fusion comprising residues 1-11 of Bacillus subtilis subtilin and residues 12-32 of Lactococcus lactis nisin. The subtilin-nisin fusion was not processed into a functional lantibiotic when expressed in B. subtilis. A heterogeneous mixture of products was produced, with none of the products having the expected properties of a correctly processed polypeptide. However, the mixture contained a minor component with a specific activity that exceeded that of nisin. The invention provides lantibiotic mutants and chimeras (see also AAV31658) having enhanced activity and stability compared to nisin and subtilin. They can be produced by cultivation of transformed host cells and used e.g. as food preservatives to treat, kill or inhibit the growth of microorganisms and/or their spores.

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                               PTM: Maturation of lantibiotics involves the enzymic conversion Thr, and Ser into dehydrated AA and the formation of thioether bonds with cysteine. This is followed by membrane translocation and cleavage of the modified precursor.

MISCELLANEOUS: USED AS A FOOD PRESERVATIVE.

MISCELLANEOUS: THE NISA GENE IS FOUND BOTH ON CHROMOSOMAL AND PLASMID DNA. THE SEQUENCES REPORTED ARE ABSOLUTELY IDENTICAL PLASMID DNA. THE SEQUENCES REPORTED ARE ABSOLUTELY IDENTICALS.

SIMILARITY: STRUCTURAL SIMILARITY TO OTHER TYPE A LANTIBIOTICS.

                                                                                                                                                                                                                                                                                                                                                                                                                            Thr, and Ser into dehydrated AA and the formation of thi bonds with cysteine. This is followed by membrane transl and cleavage of the modified precursor.
MISCELLANEOUS: SUBTILIN ACTIVITY IS OBSERVED DURING STAIPHASE, BUT NOT DURING EXPONENTIAL GROWTH.
SIMILARITY: STRUCTURAL SIMILARITY TO OTHER LANTIBIOTICS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PTM: Maturation of lantibiotics involves the enzymic conversion Thr, and Ser into dehydrated AA and the formation of thioether bonds with cysteine. This is followed by membrane translocation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1. Environ. Microbiol. 59:648-651(1993).
FUNCTION: LANTHIONINE-CONTAINING PEPTIDE ANTIBIOTIC (LANTIBIOTIC)
ACTIVE ON GRAM-POSITIVE BACTERIA. THE BACTERICIDAL ACTIVITY OF
LANTIBIOTICS IS BASED ON DEPOLARIZATION OF ENERGIZED BACTERIAL
CYTOPLASMIC MEMBRANES, INITIATED BY THE FORMATION OF AQUEOUS

                                                                                                                                                                                                                         PTM: Maturation of lantibiotics involves the enzymic conversion Thr, and Ser into dehydrated AA and the formation of thioether bonds with cysteine. The C-terminal lanthionine undergoes decarboxylation. This is followed by membrane translocation and cleavage of the modified precursor.

SIMILARITY: STRUCTURAL SIMILARITY TO OTHER TYPE A LANTIBIOTICS.
                                                                                                                                                                                                                                                                                                                     FUNCTION: LAWTHIONINE-CONTAINING REPTIDE ANTIBIOTIC (LAWTHBIOTIC) ACTIVE ON GRAM-POSITIVE BACTERIA. THE BACTERICIDAL ACTIVITY OF LAWTHBIOTICS IS BASED ON DEPOLARIZATION OF ENERGIZED BACTERIAL CYTOPLASMIC MEMBRANES, INITIATED BY THE FORMATION OF AQUEOUS
